

TSI Power SOLUTIONS to Power Quality Problems

Electrification began in the 19th century under the aegis of the storied figures Edison, Tesla, and Westinghouse. The development of the electric light, electric motor, and computer transformed the routine and rhythm of daily life beyond recognition and industrialized our world.

Today almost no part of Earth is untouched by electricity, but sadly the quality and availability of electricity cannot be taken for granted. AC grids were once reliable in developed countries, but no longer. Renewables, distortionary loads, and underinvestment combine to disrupt power quality. The situation is worse still in the developing world, much of which struggles to connect people to electricity.

TSI Power Corporation solves these problems—period.

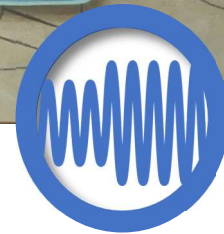

This mural is from the head offices of TSI Power Corporation

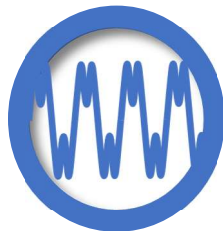

Voltage Sag

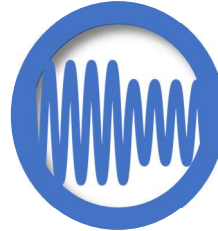

Outage

Swell / Overvoltage

Harmonic Distortion

Brownout / Undervoltage

TSI Power provides a full suite of solutions to help mitigate these power quality events.

Power Quality Problem	Solution	
Voltage Sag	<p>MVR</p> 	<p>VLC</p> 
Outage	<p>ATS</p> 	
Voltage Swell / Overtoltage	 <p>VRP</p>	<p>CVR</p> 
Brownout / Undervoltage		
Harmonic Distortion	<p>CVC</p> 	

TSI Power and our partner network consists of professionals with vast experience in power quality solutions and applications. Contact us to have a discussion about TSI solutions that will meet your need for reliable electricity.
